

The diagram shows a circular arrangement of 12 small, blurry, light-colored targets on a dark gray background. Two yellow lines with perpendicular end-caps are used to illustrate spatial parameters. One line is horizontal, spanning from the left edge to the right edge of the circle, with a text box below it indicating an eccentricity of approximately 6.7 degrees. The other line is diagonal, connecting two targets in the upper-left quadrant, with a text box next to it explaining that the spacing varies inversely with the number of targets.

Spacing

varies (inversely to number of targets)

Eccentricity

~6.7 deg
